

indoors, protected.

Viraschutz is the revolutionary solution enabling you to provide enduring, effective protection against a broad range of threats including bacteria, mold, odors and many pathogens.

Multiple needs, one convenient solution.

Viraschutz is the revolutionary solution enabling you to provide **enduring, effective protection against a broad range of threats** including bacteria, mold, odors and many pathogens.

How is this achieved?

Customer-facing businesses such as retail stores, bars, restaurant, public transportation operators are now required to implement clear, strict safety measures to guarantee health and well-being to their staff members and customers.

A broad spectrum chemical disinfection was the only viable option until today, to be repeated over and over again, more so on frequently touched surfaces like tabletops, door handles, light switches, desks, toilets, taps, TV remotes, kitchens, etc. **Viraschutz has revolutionized the disinfection process**, by using a proprietary mechanical biocide formula without using poisons.

Once applied, Viraschutz creates a semi permanent non-leaching anti microbial shield, attracting bacteria to the coated surfaces. The micro spikes on the coating will puncture the bacteria cell causing their instant death. Viraschutz is so safe that it **can be applied even when people are attending the location.**

Sanitizing that lasts, where others simply can't.

No other solution on the market today can match Viraschutz performance and flexibility: in a convenient, compact package Viraschutz delivers long-lasting protection to a broad array of indoor spaces, no matter their size or their accessibility.

Protection for months, in a minute's work

Viraschutz creates a final biostatic finish, not allowing pathogens to live on the surface for 1 year. The coating bonds to the

surface with no damage or discolor to any surface it's applied to. It dries to an invisible thickness in 10 minutes.

Food safe

Being a part mechanical, part electrostatic solution Viraschutz can be safely employed where chemicals would be off the table: this includes kitchens, bistrot and all the establishments where food is prepared, served or consumed.

Provide a safe and secure environment: everywhere, anytime.

Three simple steps to an effective, enduring protection.

Conventional cleaning

The space which requires sanitizing has to be cleaned conventionally before applying Viraschutz products.

No particular direction is required except for the surfaces to be free of dust, debris or stains.

1

Viraschutz ablator

The surfaces are then prepared by atomizing Viraschutz Ablator solution, a proven formula which kills any microorganism, leaving the location surfaces ready to take on the long lasting coating.

2

Viraschutz halos

Halos creates a permanent anti bacterial coating activated by Flow-Line electrostatic sprayer which bonds even the most secluded spot in the room. Being the surface charged, it attracts microorganisms killing them on contact.

this establishment is secured with

Viraschutz provides specific advantages over conventional sanitation solutions.

Mechanical and electrostatical permanent defence against pathogens;

Enduring, long lasting protection;

With Viraschutz, **no poisonous chemicals are used** throughout the whole cleaning process;

Error-safe usage process which makes end results predictable, thus providing a previously impossible degree of certainty;

Considerably fast set in times allow for last minute, **mission critical applications**;

Every indoor establishment, no matter the size or the **design, aesthetics or hystorical characteristics**, can be treated with Viraschutz;

Viraschutz makes regular cleaning safer and faster;

Surfaces which have been already treated with Viraschutz are **cleaner for longer**;

Viraschutz is **inodor, atoxic and hypoallergenic**.

Adopt tomorrow's cleaning solution, starting from today.

You can start providing the benefits of the most forward thinking sanitizing solution right now, leveraging the momentum and building on a **potentially unlimited customer base**. The low entry price and error-safe operational procedures make Viraschutz a solution that can easily be **provided by companies big and small** alongside their current lineup of services.

Viraschutz is backed by a broad scientific research and its effectiveness and safety have been thoroughly tested by Recusol labs. **Start providing today the sanitizing solution of tomorrow.**
